# Jeane Ramos

Full Stack Software Engineer
msjeanneramos@gmail.com • 954-279-5295

## Summary

linkedin.com/in/jeane-ramos-83339399 | github.com/jeanbeanie

Self taught full stack software engineer with many years of experience who loves building things and solving problems with code. Specializes in React, TypeScript, and Node, with a variety of experience building stuff that works, from a React migration at CBS Interactive to a live app I designed, built, and run myself, to a RimWorld mod with active subscribers. Always learning, and looking for a team where I can keep growing and be useful.

## Skills & Languages

**Technical:** React, TypeScript, Next.js, JavaScript, Node.js, Express, REST APIs, Tailwind CSS, Material UI, HTML5, PostgreSQL, MySQL, Linux, Apache, Lua, C#, GraphQL, Ruby on Rails

**Testing & Tooling:** Vitest, React Testing Library, Jest, GitHub Actions (CI/CD), Git/GitHub, ESLint, Webpack/Babel, Vim, Bash, Grafana, Claude Code, GitHub Copilot, Jira

**Planning & Analysis:** Mentoring, Communicating technical ideas to non-tech team members, Community Building, Technical Documentation, SEO, Pull Request reviews, Agile Workflows

## Professional Experience

### Full Stack Software Engineer — June 2024 – Present

*Independent*

- **YTCatchup:** Designed, built, and deployed YTCatchup, a full stack app (React, Node.js, Postgres), live in production. Built around a fixed 10,000 unit daily API quota, with aggressive caching to run on YouTube's free tier. Provides a customizable TV like experience for YouTube users wanting to catch up on their subscriptions without "the YouTube algorithm" getting in the way. (live link)
- Built an admin panel featuring live YouTube API quota tracking and an invite based access system to handle controlled scaling beyond Google's OAuth limits, handled the entire Google OAuth app verification process
- Implemented automated tests with Vitest and RTL, built Grafana dashboards integrated directly with usage data to provide real time visibility into system performance and API consumption metrics
- **LumberCamp Biome Patch:** Built and published a RimWorld mod using C# and Harmony runtime patching, delivering functional enhancements for one of my favorite games to 170+ active subscribers on the Steam Workshop (Steam Workshop link)
- **Project-Switcher.nvim:** Wrote an open source Neovim plugin in Lua that allows for quickly switching between projects while restoring project sessions in a single Neovim instance. (View in GitHub)
- **Python-Agent:** A tiny terminal chatbot for developers that I built for fun to learn the Python language, the LangGraph/LangChain API, and GraphQL (View in GitHub)
- **Jeane.dev:** Deployed a personal engineering site using Next.js, providing a live, accessible showcase of ongoing technical work and professional projects for the broader developer community (live link)

### Founder & Organizer — May 2019 – November 2020

*ReactJS Fort Lauderdale (Meetup.com)*

- Founded and organized a local React meetup group, later merging with FloridaJS to co-organize community events. My proudest moment was hosting a virtual Q&A session for the group featuring React core team member Dan Abramov

**Frontend Engineer** November 2018 – August 2020

*CBS Interactive*

- Played a central role in porting the high traffic Fantasy Sports application frontend (used by millions of users per month) from a legacy Perl and jQuery stack to a modern React and Node.js architecture
- Delivered high quality reusable UI components and pages with accessibility built in (WCAG contrast compliant, screen reader and keyboard support)
- Worked directly with designers, QA, product managers, and other teams to ensure shipped code met expectations and progress matched project timelines
- Reviewed pull requests daily and mentored junior developers on React patterns and best practices while writing and maintaining automated tests to ensure long term code maintainability

**JavaScript Developer** June 2018 – October 2018

*Maximus Live*

- Built and edited React components including forms, tables, tabbed views, and more for a native ad automation platform integrating Gemini, Taboola, and Outbrain, updating them as backend changes shipped. Refactored redundant code, traced and fixed production bugs
- Participated in daily stand ups, weekly retrospectives, wrote documentation, mentored juniors, and reviewed pull requests as part of a small team of developers in an intense high output startup environment

**Full Stack Developer** 2010 – 2019

*Independent*

- Built and monetized various web projects from scratch using Node.js, React, Ruby on Rails, AngularJS, LAMP, and WordPress, managing Linux servers for deployment while continuously adopting new languages and frameworks
- **Hearthstone Card Ranker:** AngularJS site featuring an algorithm that scores each card's mechanics against a baseline value for its mana cost, and a deck building tool with filters, sorting, and local storage persistence
- **Hxegamer.tv:** Full stack app (Ruby on Rails, SQLite, JavaScript) that turned YouTube playlists into 15+ simulated "live" scheduled TV channels that focused on various video game related topics
- **Cyberica Media Publishing:** A content and social media marketing service I built and ran that provided custom articles, social post packages, and SEO services. Site integrated Stripe and PayPal for payments and had repeat customers (PHP, WordPress)
- **ImSoCode:** Built and self hosted a PHP and AngularJS tutorial and community blog that had an engaged readership and made Google's first page of search results with my coding tutorials multiple times

## Education

High School Diploma, Talented Unlimited High School

## About Me

Besides my passion in all things tech related, I enjoy science fiction/fantasy literature, watching anime, PC games like Sid Meier's Civilization, RimWorld, and Heroes of the Storm, traditional illustration, practicing viola, cooking for friends, and walking in nature
