Jeane Ramos

Full Stack Software Engineer
954-279-5295 • msjeanneramos@gmail.com

Summary

jeane.dev | github.com/jeanbeanie | linkedin.com/in/jeane-ramos-83339399

Self taught full stack engineer who helped migrate a Fantasy Sports app used by millions each month to React at CBS Interactive. Now I build and run my own production app, with a growing passion for AI-assisted development. I love building stuff that works, and fixing stuff that doesn't.

Professional Experience

Full Stack Software Engineer October 2021 – Present
Independent Projects *Denver, CO (Remote)*

- **YTCatchup:** Designed, built, and run a full stack app (React, TypeScript, Node.js, Postgres) live in production, with a Catch Up mode that autoplays your subscriptions like TV, without the algorithm. Runs an invite only beta entirely on YouTube's free API tier (10,000 units a day, $0 API cost) while caching over 75,000 videos across 1,780 channels. (live link) (View in GitHub)
- Built an admin panel with live quota tracking, a refresh kill switch, and invite based access to control growth against the shared daily quota, plus Grafana dashboards on real usage data, and took the app through Google's OAuth verification.
- Secured Google sign in with CSRF protection and encrypted refresh tokens, backed by Vitest and React Testing Library tests, accessibility checks (jsx-a11y, vitest-axe), and CI on every pull request.
- **LumberCamp Biome Patch:** Built and published a RimWorld mod in C# with Harmony runtime patching, enhancing one of my favorite games for 170+ active Steam Workshop subscribers (Steam Workshop link)
- **Project-Switcher.nvim:** Wrote an open source Neovim plugin in Lua that allows for quickly switching between projects while restoring project sessions in a single Neovim instance. (View in GitHub)
- **Python-Agent:** A tiny terminal chatbot for developers that I built for fun to learn the Python language, the LangGraph/LangChain API, and GraphQL (View in GitHub)
- **Jeane.dev:** Built my personal site and technical blog with Next.js and Tailwind, publishing tutorials like a React list virtualization guide with measured before and after performance, about 10 fps vs. 60 fps (live link)

Frontend Developer February 2021 – May 2021
Floify *Boulder, CO*

- Built React and TypeScript features for lender and borrower facing mortgage document pages, and began modernizing legacy upload pages onto the team's React stack

Founder & Organizer May 2019 – November 2020
ReactJS Fort Lauderdale (Meetup.com) *Fort Lauderdale, FL*

- Founded and organized a local React meetup, later merging with FloridaJS to co-organize events. My proudest moment was hosting a virtual Q&A with React core team member Dan Abramov

Frontend Engineer November 2018 – August 2020
CBS Interactive *Fort Lauderdale, FL*

- As part of a small frontend team, played a central role in moving the Fantasy Sports frontend, used by millions of users each month, from Perl and jQuery to React and Node.js, making it easier to maintain and extend
- Shipped reusable UI components and pages with accessibility built in (WCAG contrast, screen reader and keyboard support), so new features met accessibility standards by default

- Worked directly with designers, QA, and product managers to ship on schedule
- Mentored 2 junior developers through daily code reviews, and wrote automated tests to keep the codebase maintainable

JavaScript Developer June 2018 – October 2018
Maximus Live *Miami Beach, FL*

- As one of two frontend developers at an early stage startup, built React forms, tables, and tabbed views for a native ad automation platform integrating 3 ad networks (Gemini, Taboola, and Outbrain), keeping the UI in sync as backend changes shipped
- Mentored a junior frontend developer and coached 3 bootcamp graduate backend developers on Git, databases, and debugging, while tracing production bugs and refactoring redundant code

Full Stack Developer 2010 – 2019
Freelance & Independent Projects *Remote*

- Built and monetized various web projects from scratch using Node.js, React, Ruby on Rails, AngularJS, LAMP, and WordPress, managing Linux servers for deployment while continuously learning new languages
- **Hearthstone Card Ranker:** AngularJS site featuring an algorithm that scores each card's mechanics against a baseline value for its mana cost, and a deck building tool with filters, sorting, and local storage persistence
- **Hxegamer.tv:** Full stack app (Ruby on Rails, SQLite, JavaScript) that turned YouTube playlists into 15+ simulated "live" scheduled TV channels that focused on various video game related topics
- **Cyberica Media Publishing:** A content and social media marketing service I built and ran that provided custom articles, social post packages, and SEO services. Site integrated Stripe and PayPal for payments and had repeat customers (PHP, WordPress)
- **ImSoCode:** Built and self hosted a PHP and AngularJS tutorial and community blog that had an engaged readership and made Google's first page of search results with my coding tutorials multiple times

Education

High School Diploma, Talented Unlimited High School, New York, NY

Highest SAT score in my graduating class · Viola, All City High School Orchestra

About Me

Besides my passion in all things tech related, I enjoy science fiction/fantasy literature, watching anime, PC games like Sid Meier's Civilization, RimWorld, Factorio, and Heroes of the Storm, traditional illustration, practicing viola, cooking for friends, and walking in nature

Skills & Languages

Technical: React, TypeScript, Next.js, JavaScript, Node.js, Express, REST APIs, Tailwind CSS, Material UI, HTML5, PostgreSQL, MySQL, Linux, Apache, Lua, C#, GraphQL, Ruby on Rails

Testing & Tooling: Vitest, React Testing Library, Jest, GitHub Actions (CI/CD), Git/GitHub, ESLint, Webpack/Babel, Vim, Bash, Grafana, Claude Code, GitHub Copilot, Jira

Planning & Analysis: Mentoring, Communicating technical ideas to non-tech team members, Community Building, Technical Documentation, SEO, Pull Request reviews, Agile Workflows
